

Freelance Full-Stack Developer (Web3/Kaspa)

PROJECT: GEEK PROTOCOL (\$GEEK) // ROLE: SHORT-TERM FREELANCER
LOCATION: REMOTE (GLOBAL) // DURATION: 4-6 WEEK CONTRACT

About Us

Geek Protocol is a pre-launch Web3 project with a mission to become the ultimate hub for geek culture on the Kaspa network. We're building a top-tier gamified ecosystem where users can learn, compete in high-stakes trivia, and earn rewards. Our project is fully planned, with a comprehensive blueprint, finalized tokenomics, and a live community presence. We are now seeking a talented technical partner to build our Testnet MVP and bring the core concept to life.

Your Mission: Build the Testnet MVP

Over a 4-6 week period, you will be responsible for building a functional prototype of our Quiz2Earn dApp on the Kaspa Testnet (TN10). This MVP is the most critical asset for our upcoming seed funding proposal.

Core MVP Features to Build:

- **Wallet Connection:** A frontend interface that allows users to connect their Kaspa-compatible wallet.
- **Basic Quiz Flow:** A simple UI where a user can play one round of 10 questions.
- **Score Tracking:** A backend process that validates answers and calculates the score.
- **On-Chain Rewards:** An automated transaction that sends a pre-determined amount of Testnet ` \$GEEK ` tokens to the user's wallet upon quiz completion.

Compensation & Partnership Structure

This is a foundational, pre-seed opportunity. As such, the compensation for this initial 4-6 week contract is structured as a significant, success-based reward. **The delivery of the entire compensation package is contingent upon the successful close of our seed funding round,** which this Testnet MVP is designed to help us secure.

We are looking for a true partner who is excited by a high-upside opportunity. We have multiple flexible compensation options (including token grants, cash, and long-term hybrid roles) that we will discuss with top candidates.

Required Tech Stack & Skills

- **Frontend:** React.js, Tailwind CSS
- **Backend:** Node.js
- **Web3:** Ethers.js (or equivalent)
- **Blockchain:** Experience with any blockchain and a willingness to become an expert on the Kaspa network.

The Ideal Candidate

- Is a self-starter who can take a detailed plan and execute it efficiently.
- Has a strong portfolio of live dApps or Web3 projects.
- Is an excellent communicator and passionate about crypto-gaming.

To Apply

Please provide a link to your portfolio or GitHub and a brief note explaining why you are excited about this project.
